VALUATION REPORT

Strategic Valuation — Current Day and 5-Year Outlook

Confidential · May 2026

Headline valuation summary

Year	Low (USD M)	Mid (USD M)	High (USD M)	Methodology
2026 (current)	8	11	14	Pre-revenue: technology asset value + founder execution premium
2027 (Y2)	30	40	50	Revenue multiple (8x) on USD 4.2M ARR
2028 (Y3)	85	108	130	Revenue multiple (7.5x) on USD 14.5M ARR
2029 (Y4)	210	265	320	Revenue multiple (6.3x) on USD 42M ARR
2030 (Y5)	490	615	740	Revenue multiple (6.3x) on USD 98M ARR + B2B SaaS premium

Methodology notes

1. Pre-revenue valuation (2026)

Standard practice for pre-revenue ventures with shipped code uses the cost-to-recreate plus founder-execution premium method. Estimated reproduction cost of the current codebase by a typical agency: USD 4.5 to 6.0 million (16 subdomains × 9 runtime libraries × estimated engineering hours at USD 75-125/hour, including QA, design, and brand). Founder execution premium: 1.5x to 2.5x depending on velocity benchmarks.

Range: 4.5 × 1.5 = USD 6.75M (low); 6.0 × 2.5 = USD 15M (high). Mid-point: USD 11M.

2. Revenue multiple

Public comparables for vertical SaaS in emerging markets (Sea Group, GoTo Group, VNG, MOMO valuations) traded between 6x and 10x revenue during 2023-2025. Private comparables in identity and credential space (Trulioo, Onfido) traded between 8x and 12x ARR. Vetuonglai is in identity + emerging market + integrated wallet category — applying 6.3x to 8x range, declining slightly each year as the base scales.

3. B2B SaaS premium (Year 4-5)

B2B VC issuer licensing and identity verification API revenue carries higher multiples (10x-15x) than B2C subscription due to lower churn and higher gross margin. By 2030, an estimated 30 percent of revenue mix shifts to B2B — pulling the blended multiple upward.

Sensitivity analysis

How does valuation change if key drivers differ from base case?

Scenario	Y3 Revenue	Y5 Revenue	Y5 Valuation (mid)
Bear (slow adoption, 1 market only)	USD 6M	USD 35M	USD 175M
Base (planned execution)	USD 14.5M	USD 98M	USD 615M
Bull (SEA accelerates + B2B accelerates)	USD 22M	USD 165M	USD 1,150M

Investor returns under each scenario

Assuming USD 3M raise at USD 11M post-money valuation (Series Seed); investors own ~21.4% pre-dilution:

Scenario	Y5 Valuation	Investor Y5 share value (pre-dilution)	MOIC (multiple on invested capital)
Bear	USD 175M	USD 37.5M	12.5x
Base	USD 615M	USD 131.6M	43.9x
Bull	USD 1,150M	USD 246.1M	82.0x

Note: assumes ~30 percent dilution from later rounds. After dilution: 8.7x (Bear), 30.7x (Base), 57.4x (Bull).

Comparable transactions

Company	Stage	Country	Valuation	Revenue multiple
Sky Mavis (Axie Infinity)	Series B 2022	Vietnam	USD 3.0B	n/a (token model)
MoMo	Series E 2021	Vietnam	USD 2.0B	~12x
Tiki	Pre-IPO 2021	Vietnam	USD 832M	~5x
VNG	Public	Vietnam	USD 1.8B	~4x (mature)
Coursera	IPO 2021	Global edtech	USD 5.9B	~12x at IPO
Trulioo	PE 2021	Identity	USD 1.75B	~14x
Onfido	PE 2025	Identity	USD 650M	~10x

Strategic optionality

Beyond financial returns, Vetuonglai's strategic position creates optionality:

- Acquisition by domestic incumbent: Vietnamese tech leader looking for identity layer (estimated bid premium 2-3x)
- Acquisition by international identity company: Trulioo, Onfido, Jumio extending into SE Asia
- Strategic alliance with major bank: Vietcombank, Techcombank, or BIDV adopting VC for KYC
- IPO at maturity: Local listing (HOSE) or international (NASDAQ) once revenue exceeds USD 100M
- Token economy expansion: Wallet system can extend to community tokens for governance and reward — additional capital efficiency lever
